Serial No. 09/727,236 Art Unit 1653

This application contains sequence disclosures that are encompassed by the definitions for amino acid sequences set forth in 37 CFR 1.821. However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825 with regard to the sequence disclosures.

See, for example, the sequences on page 4, paragraph 2.

Applicant is given the time period set in this letter within which to comply with the sequence rules, 37 CFR 1.821-1.825. Failure to comply with these requirements will result in ABANDONMENT of the application under 37 CFR 1.821(g). Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136. In no case may an applicant extend the period for response beyond the six month statutory period.

*

Restriction to one of the following inventions is required under 35 U.S.C. §121:

- Claims 1-14, drawn to a method of controlling a pest by administering a compound in which R₁ is -NH₂.
- Claims 1-14, drawn to a method of controlling a pest by administering a compound in which R₁ is hydrogen or hydroxyl.
- 3. Claims 15-19, drawn to a method of initiating a TMOF receptor-mediated biological response using a compound in which R_1 is $-NH_2$.
- 4. Claims 15-19, drawn to a method of initiating a TMOF receptor-mediated biological response using a compound in which R_1 is hydrogen or hydroxyl.

Serial No. 09/727,236 Art Unit 1653

- 5. Claims 20-30, drawn to a compound in which R₁ is -NH₂.
- 6. Claims 20-30, drawn to a compound in which R₁ is hydrogen or hydroxyl.
- 7. Claims 31-49, drawn to a method of controlling a pest or initiating a TMOF receptormediated biological response.
- 8. Claims 50-60, drawn to compounds.

The claimed inventions are distinct.

Each of claims 1, 15 and 20 has been bisected into two groups, depending on the presence of an amino group at R1. It is asserted that some of the compounds are known in which R1 is amino. Applicants' proviso at the end of claim 1 is noted. However, it is not clear what exactly is excluded. First, the language used is "subject to". This could mean that the exclusion is merely an option, not a requirement. Second, the first proviso is that one of R7 and R8 is carboxy or alkylcarboxy; however, this is confusing because the claim otherwise prohibits R7 from being carboxy, and prohibits R8 from being allkylcarboxy. So to exclude something that is not claimed to begin with does not make sense. Third, the second proviso makes reference to a variable "R". However, there is no variable "R" present in the formula. Perhaps applicants intend to refer to R7. This still leaves the possibility that R1 can be amino, at the same time that "A" represents a proline. It is likely that such compounds are known in the prior art.

Inventions {5, 6} and {1-4} are related as product and process of use. The inventions can

Serial No. 09/727,236 Art Unit 1653

be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP 806.05(h)). Nevertheless, in the event that one of the groups drawn to compounds is elected, and claims therein found allowable, the corresponding method-of-use claims will be rejoined for further examination [In re Ochiai (37 USPQ2d 1127)]. Of course, in such a case, whatever limitations were agreed to for the genus of compounds would apply also to the methods.

Further rejoining is not precluded by the fact of initial restriction. For example, if applicants were to elect either of Groups 1 or 2, and that group proved to be novel, or mostly novel, the other (of the two) would likely be rejoined.

With respect to Groups 3 and 4, there is the matter of inherency. For example, suppose that process $G \to H$ (below) is a TMOF receptor-mediated biological response:

$$A \rightarrow B \rightarrow C \rightarrow D \rightarrow E \rightarrow F \rightarrow G \rightarrow H \rightarrow I \rightarrow J \rightarrow K \rightarrow L \rightarrow M \rightarrow N$$

This would make the process of $A \rightarrow N$ also a TMOF receptor-mediated biological response. It is unlikely that the potential inherency issues will be settled at this point. However, the fact that such issues will have to be addressed provides some justification for restricting between the method of claim 15, and the method of claim 1.

Art Unit 1653

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed potition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(b).

In addition to the foregoing, applicants are required under 35 U.S.C. §121 to elect a disclosed specie for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. A "specie" is a specific compound, with all substituent variables accounted for. In the event that applicants elect one of the groups of claims drawn to a method of controlling a pest, a second species election is that of a specific pest. In the event that applicants elect either of Groups 3 or 4, a second species election is that of a specific TMOF receptor-mediated biological response. Thus, in the event that Group 7 is elected, a total of three species elections is required.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a generic claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are witten in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentable distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. §103 of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Lukton. Phone: (703) 308-3213.

An inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0196.
